

SUTURE STRIP® WOUND CLOSURE STRIPS

Suture Strip® is a latex free wound closure strip that provides superior wound security, but with slightly less flexibility than Suture Strip® Plus, making it an economical alternative. The inherent flexibility of the product allows the strips to elongate and yield to the movement of skin, preventing the concentration of forces at the proximal ends and reducing the chances of traction blisters or skin shear. The strips are water resistant and have a skin-friendly adhesive. Latex Free.

NG STRIP® NASAL TUBE FASTENER

NG Strip® is a latex free securement device for any nasogastric or nasal feeding tube. NG Strip® eliminates the time consuming ritual of securing nasal tubing with strips of irritating tape. NG Strip® features flexibility and dynamic adherence which provide excellent tape-to-skin adhesion while minimizing the tension that may result in irritation, blistering, or skin shear. NG Strip® also minimizes the chance of irritation and tissue necrosis that are common with conventional tapes.

Order #	Details	Quantity
NG50	Adult - 10/pouch, 5/box	10/pkg, 5 pkgs/box, 50/box
