

EMEA Virtual Course – Treatment Planning and Implant Selection in Aesthetic Breast Surgery

Content of Professional Education Offering

FACULTY

Mr. Paul Harris (United Kingdom), Mr. Marc Pacifico (United Kingdom)

CLINICAL SOLUTION

The focus of this course is on achieving optimal aesthetic outcomes and increased patient satisfaction by selecting the implant solutions to match the patient body type, as well as their expectations and desires. The course has been designed for a modern learner requiring efficient time management, through a combination of pre-study material and live discussion with experts.

The participants are also encouraged to bring 1-2 slides describing their own case on which they would like to receive expert advice.

TECHNICAL SOLUTION

- MENTOR® CPG™, MENTOR® MemoryGel® and MENTOR® MemoryGel® Xtra Breast Implants

Learning Objective

- Advance decision-making in implant selection
- Refine communication to patients regarding breast implant options and safety
- Upgrade patient measurement & surgical technique in complex primary cases
- Advance decision-making in revision surgery
- Apply to challenging cases: bring your own case for discussion

Target Group – Intermediate/ Expert

The ideal profile of the course participant is plastic surgeons with at least 4 years in independent private practice who wish to refine their understanding of patient selection and implant options as well as advance their surgical technique in challenging primary and revision cases.
