

Testicular Prosthesis

N&S is a soft-solid implant made of low hardness silicone elastomer, to resemble natural aesthetic of the testicle. It is designed to replace the testicle in shape and size in one or both sides to restore the normal appearance of the scrotum and improve the Quality of Life of the patient.

N&S is indicated in patients who have suffered from testicular agenesis or for those who have had or need to have a testicle removed through surgery due to different pathologies.
